Air Sampling Instructions

What you need before you start:

The contents of the kit, a watch/timer, a pen / marker and about 45 minutes total (or figure 10 minutes per test location)

2. Fill out form on back side of this pamphlet.
3. Peel stickers off both ends of 1st cassette. Using a marker, write a number and location on the side of cassette, and write the same info on the form located on back of this pamphlet. For example: # 1 / Outside
**** Please take an Outdoor sample. Exterior baseline sample is crucial for your comparison data chart.*
4. Connect tubing to circular opening on one end of cassette where you removed sticker.
5. Connect un-used end of tubing to the pump.
6. Get your watch or timer ready.
7. Plug pump into standard outlet.
8. Write start time on form
9. Start pump and timer. (verify flow of 15 L on meter, adjust if necessary)
10. Run pump for 10 minutes.

Air Sampling Instructions

*Continued from page 1.

9. After 10 minutes, turn off pump, record stop time, remove cassette from tubing, replace stickers on both ends, unplug pump from outlet and prepare to move to next test location.

Sample #1 is COMPLETE.

1. Move kit contents to next area to be tested. Remove next un-used cassette from bag and repeat steps 2-10 for each area to be tested.

Watch our helpful "how to" video at:
<http://www.moldlab.us/air-quality-tests.html>

You're Done!

Discard clear tubing, it does not need to be returned to lab.

Repack pump, your air collection cassettes and this pamphlet.

Attach the prepaid return postage label to outside of package and drop off at any US Post office. For the location nearest you call 1-800-ASK-USPS®

**** Prompt return is expected, as your kit needs to be recalibrated and shipped to the next client. If the kit is not received back at Moldlab within 7 business days or return post mark dated by*

_____ your credit card will be charged a \$45 per day equipment rental fee.

Your lab results report will be emailed/faxed 24-48 hours after we receive the returned kit.

What a typical air sample looks like as viewed by the technician during analysis
